

Supplementary Figures

Supplemental Figure S1. Schematic representation of the annotated bovine coronavirus genome sequence determined in this study. Predicted coding sequences (CDS) are shown and named using the nomenclature of the polypeptides they encode are illustrated.

Supplemental Figure S2. Schematic representation of the annotated bovine nidovirus genome sequence determined in this study. Predicted coding sequences (CDS) are shown and named using the nomenclature of the polypeptides they encode are illustrated.

Supplementary Tables

Supplemental Table S1. Oligonucleotide pairs used for PCR amplification and direct amplicon sequencing to resolve gaps and/or regions of low sequence coverage in the bovine coronavirus (BCoV) genome following the assembly of next generation sequencing data.

Pair ID	Name	Primer sequence (5' to 3')	Amplicon size (bases)
BCoV 1	Forward	GCATCCCGCTTCACTGAT	235
	Reverse	ATTCTGGAGCCCAGTGTAGTT	
BCoV 2	Forward	ATGAGGCTGGCGAGGAA	206
	Reverse	CATCATCCAAAGTGTCTCTAAGAT	
BCoV 3	Forward	GAGCAAGCTTCCCTCAATTCT	1408

Supplemental Table S5. Comparison of the threshold cycle (Ct) values from the quantitative real-time PCR analyses of extracts from nasal swab from feedlot cattle diagnosed with bovine respiratory disease (case) and health cattle (control). The results for bovine coronavirus (BCoV), bovine respiratory syncytial virus (BRSV), influenza D virus (IDV), bovine rhinitis A virus (BRAV), bovine nidovirus (BNV), and ungulate bocaparvovirus 6 (UBPV6) are shown.
